

## **MPFD Foil Activation Experiment Resource**

John Boyington

Kansas State University

### **Inventory**

1. Loaded wand
2. Stopwatch
3. Sample Bags (Four plastic bags labeled #1, #2, #3, and #4; #1 corresponds to the highest axial position.)
4. Sample pig for transportation
5. Wire Cutters

### **Procedures**

For each wand:

1. Raise reactor power to  $P$  then insert wand into reactor core.
2. Irradiate foil for  $t_i$ .
3. Scram reactor and remove wand from reactor core.
4. Place in fuel storage rack for  $t_w$ .
5. Pull wand to surface and remove internals. Remove foils from internals and place in labeled bags. Place bags in sample pig.
6. Count foils one at a time with HPGe for listed counting time.

### **Irradiation Order (6/22/18)**

1. Wand 0 Rh, Au, In
2. Wand 2 In(Cd)
3. Wand 3 Au(Cd)
4. Wand 4 Al
